MA22037 COURSEWORK COVER SHEET (2026)

General instructions

Set: Wednesday 18th March at 12pm

Due: Wednesday 15th April at 5pm

Estimated time required: Approximately 14 hours.

Submission: You are expected to upload your solutions to the submission point on Moodle as a **single document**, containing both the code and the mathematical writeup. Please submit two versions of your report: one as a .pdf file and one as a .ipynb file.

Conditions: This is an individual coursework, so you should **not** discuss it with other students. You may use generic scientific Python packages, such as *numpy*, *scipy*, *sympy*, *matplotlib* and *skimage* (along with their official documentation). You may **not** use third-party code tailored to the questions, especially if they were written *for* you.

As usual for courseworks, the marking will be **not** anonymous. Please use your name (not the candidate number) in the files.

Value: This coursework carries 25% of the total marks for the unit.

Length: There is no minimum or maximum length for this assignment. In marking, emphasis will be placed upon correct, clear and precise argument in the written work as well as correct, well-structured and commented code.

Support and advice: You can ask **general** questions about the coursework to the lecturer (James Foster, `jmf68@bath.ac.uk`). You can also post questions on either the anonymous Padlet forum or the Moodle Q&A forum.

Feedback: You should receive feedback within three weeks following the submission deadline. The feedback will consist of your marked work and an overall feedback document commenting on the assessment across the cohort.

Late submission of coursework: If there are valid circumstances preventing you from meeting the deadline, your Director of Studies may grant you an extension to the specified submission date, if it is requested before the deadline. Forms to request an extension are available on SAMIS.

- If you submit a piece of work after the submission deadline and no extension has been granted, the maximum mark possible will be the pass mark.
- If you submit work more than five working days after the submission deadline, you will normally receive a mark of 0 (zero), unless you have been granted an extension.

Academic integrity statement: Academic misconduct is defined by the University as "the use of unfair means in any examination or assessment procedure". This includes (but is not limited to) cheating, collusion, plagiarism, fabrication, or falsification. The University's Quality Assurance Code of Practice, QA53 Examination and Assessment Offences, sets out the consequences of committing an offence and the penalties that might be applied.

Generative AI: Type B: GenAI tools may be used to answer any question but their use is not mandatory in order to complete the assessment. Under the University's Academic Integrity Statement, you 'must not present content created by generative AI tools as though it were your own'. Any text or code produced by GenAI must be checked for correctness and cited.

In addition, you must **include a short statement** (max 250 words) at the beginning of your submission indicating: what tools you used and **how** you used them **OR** that you have not used GenAI. You should be prepared to explain anything in your submission to an examiner if asked to do so.
